Sennheiser Tourguide 2020-D is the unique guided tour system for any city or business tour ensuring that you will be heard both clearly and distinctly. Your audience will simply need to wear a wireless Tourguide receiver:

Sennheiser HDE 2020-D Stethoset receiver

The Stethoset is the most popular receiver for the Sennheiser Tourguide 2020-D system. This headset is lightweight, comfortable to wear and built to last.

This truly unique device integrates both the receiver and headphones.

No longer will your audience have to carry any more equipment than is absolutely necessary and being a one piece device they will no longer risk a tangle of cables!

The powerful battery ensures that the device will work for up to 8 hours.

Sennheiser Tourguide 2020-D will ensure that your tour will proceed without interruption.

The stethoset receiver automatically deactivates itself the moment that it is taken off meaning battery life will be preserved. No longer will the tour guide need to check all of the sets after one tour finishes and before the next tour starts.

The Stethoset headset receivers share the same easy to use controls.

Your tour participants will be able to individually adjust the volume through a rotary control without the need to even take the device off.

A liquid crystal display will clearly confirm the battery status, volume, channel being listened to and the quality of the reception.

Channels can easily be set and adjusted by using the middle rocker switch.

Six channels are available allowing up to six tours to take place simultaneously in the same venue. There is no limit to the number or type of receivers that can be used on a system.

To turn on the headset simple pull gently apart the earpieces this will turn on the headset

Sennheiser SKM 2020-D Handheld transmitter

The handheld transmitter has an integrated microphone and is the easiest way to address your audience.

To turn on the microphone at the bottom there is a red on off switch simply push this and you will see the LCD display light up, the microphone is ready to use. Please ensure the microphone is on the correct channel (1-6).

Sennheiser SKM 2020-D Headset transmitter

Similar in practice to the Handheld transmitter. Power the device on, then make sure the 'mute' switch on top is set to 'unmute'. Check it is set to the correct channel (1-6).

Sennheiser EZL 2020-D Portable charger/storage case

The portable charger case has been designed to be highly user-friendly.

It acts as both the storage case for all the equipment and the charging station for the Tourguide transmitter and receivers.

Two charging bays for the transmitter (or its rechargeable battery pack) and twenty charging bays for the receivers are provided.

An impressive feature of the charging case is the Copy button. All you need to do is to set one receiver to the correct channel, press this button just once, and all of the other receivers in the case will immediately be set to the same channel

PLEASE PLACE HEADSETS ON CHARGE AS SOON AS RECEIVED
